

Harshitha Gangasani

Corpus Christi, Texas (Willing to relocate) | +1 (720) 419-5920 | harshithagangasani5@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Data professional with 6+ years of experience delivering product, operational, financial, and business analytics using SQL, Python, Power BI, Tableau, and Snowflake. Experienced owning analytics from stakeholder requirements and data preparation through KPI design, dashboard development, forecasting, experimentation, and executive reporting. Combines hands-on technical depth with strong business partnership to translate complex data into measurable decisions across management, Product, Operations, Finance, and Engineering teams.

PROFESSIONAL EXPERIENCE

City of Corpus Christi

Senior Management Analyst

Corpus Christi, TX

Jan 2026 – Present

- **Owned** analytics delivery across six operational functions, translating management questions and fragmented fleet, workforce, financial, and service data into prioritized analyses, standardized KPIs, and reporting solutions that established 23 performance measures for leadership.
- **Architected** an Azure-hosted fleet analytics application from AssetWorks work-order data using Python, FastAPI, and Streamlit, exposing vehicle availability and repair trends for management decisions while reducing weekly reporting effort by 80%.
- **Diagnosed** route and utilization inefficiencies by integrating Samsara and DataBridge trip data with SQL and Python using CTEs, window functions, complex joins, aggregations, and subqueries, guiding driver-to-route adjustments that reduced completion time on longer routes by 20%.
- **Anticipated** high-risk vehicle failures by analyzing AssetWorks maintenance history and telematics patterns in Python, surfacing risk 30–60 days earlier and enabling proactive maintenance decisions that reduced fleet downtime by 20%.
- **Forecasted** operational demand from historical data covering 18M+ tons of collected waste and translated trends into Power BI models using DAX and Power Query, improving forecast accuracy by 10% and supporting staffing decisions that reduced overtime by 20%.

Instacart

Product Data Analyst (Data Science & Experimentation)

USA

Jul 2024 – Jan 2026

- **Investigated** fulfillment behavior across three product pods using SQL and Python, isolating routing and slot-allocation drivers behind cancellations and informing product changes that reduced order cancellations by 9%.
- **Designed** and deployed data pipelines using Snowflake, dbt, and Airflow to process 10TB+ of daily order and fulfillment data, resolving reporting bottlenecks and cutting refresh latency by 40%.
- **Standardized** fulfillment, SLA, cancellation, and customer-performance definitions after identifying inconsistent metric usage across Product and Operations, creating a common measurement framework for self-service analysis and executive reporting.
- **Modeled** promotional demand using historical orders, inventory, pricing, and fulfillment data with Python and regression-based forecasting, identifying demand patterns that improved forecast accuracy by 18% and strengthened capacity planning.
- **Validated** pricing hypotheses through A/B testing, SQL-based conversion analysis, t-tests, and 95% confidence intervals, identifying the higher-performing variant and supporting a pricing decision that increased conversion by 12%.

University of Colorado Denver

Instructional Assistant (Analyst)

Denver, CO

Aug 2022 – May 2024

- **Automated** preparation of 2,000+ academic and financial records using Python, pandas, NumPy, Excel, and Power Query, replacing repetitive manual workflows and reducing reporting turnaround by 25%.
- **Visualized** budget-to-actual, enrollment, course-utilization, and student-performance data through Power BI models and DAX measures, giving faculty a consolidated view of departmental planning and academic outcomes.
- **Assessed** assessment-quality data using variance, correlation, z-scores, and statistical validation techniques, identifying question difficulty and performance patterns that strengthened evaluation consistency.
- **Quantified** departmental spending, instructional costs, staffing requirements, and resource demand through forecasting and variance analysis, giving leadership evidence to prioritize budget and capacity decisions.
- **Translated** learning-outcome and performance trends into recommendations for faculty, helping adjust instructional pacing and resource allocation and contributing to an 8% improvement in average course performance.

Tudip Technologies

Data Analyst

India

May 2020 – Jul 2022

- **Revamped** fragmented SLA and defect reporting into standardized Tableau dashboards, consolidating delivery and quality metrics into a common management view adopted across six client projects.
- **Streamlined** recurring analysis of 100K+ monthly issue records through optimized MySQL queries and automated transformations, eliminating manual processing steps and reducing reporting cycles by 30%.
- **Uncovered** recurring defect drivers through Python-based root-cause and trend analysis of engineering data, translating patterns into corrective actions that contributed to a 15% reduction in issue recurrence.
- **Established** a release-quality KPI framework after identifying inconsistent performance measures across Agile teams, improving alignment on defect, SLA, backlog, and delivery-performance reporting.
- **Mentored** two junior analysts on SQL query optimization, data validation, and Tableau development, strengthening analytical consistency while improving the team's ability to independently deliver recurring reports.

TECHNICAL SKILLS

Programming & Query Languages: SQL (Snowflake, MySQL; CTEs, Window Functions, Complex Joins, Aggregations, Subqueries, Query Optimization, Data Validation), Python (pandas, NumPy, Matplotlib, Scikit-learn), R (tidyverse)

Business Intelligence: Power BI, DAX, Power Query, Tableau, Advanced Excel (PivotTables, XLOOKUP, VLOOKUP, Conditional Formatting), Data Modeling, KPI Design, Dashboard Development, Self-Service Analytics, Executive Reporting, Data Storytelling

Product & Statistical Analytics: A/B Testing, Hypothesis Testing, T-Tests, Confidence Intervals, Regression, Forecasting, Funnels, Cohort Analysis, Retention, Conversion, Segmentation, Metric Definition

Data Platforms & Analytics Engineering: Snowflake, dbt, Airflow, ETL/ELT, Data Warehousing, Analytical Data Modeling, Reusable Datasets, Data Quality Validation, Git/GitHub

Cloud, Automation & Tools: Azure, AWS, FastAPI, Streamlit, REST API Integration, Jira, Confluence, AssetWorks, Samsara, DataBridge

EDUCATION

University of Colorado Denver – Master of Science, Business Analytics

Denver, CO | Aug 2022 – May 2024

Anurag Group of Institutions – Bachelor of Technology, Information Technology

India | Aug 2016 – May 2020
